NORTHWEST POWER PLANNING COUNCIL
PROPOSED PROTECTED AREAS LIST
May 2, 1988

Introduction

The Northwest Power Planning Council's Proposed Protected Areas List identifies the river reaches the Council has studied in connection with its protected areas rulemaking proposal, and indicates which of these river reaches the Council proposes to designate as "protected" in the Columbia River Basin Fish and Wildlife Program and the Northwest Conservation and Electric Power Plan. This list is being distributed in its entirety or in parts, depending on the needs of the person requesting the list. The list should be used in connection with the Council's protected areas proposal set out in a paper called "Protected Areas; Background and Text of Proposed Amendments," (May 2, 1988).¹ Copies of this paper are available from the Council's Public Involvement Division, 851 S.W. Sixth Avenue, Suite 1100, Portland, Oregon, 97204.

These documents announce a proposal, not a final decision. In fulfillment of its obligations under the Northwest Power Act and other laws, the Council will hear and consider public comments before making any final decision. In the Council's final determination, stream reaches may be added to or deleted from this Proposed Protected Areas List, based on public comment or further analysis.

How to Use This List:

The list shows by "stream reach"² each of the areas for which protection is proposed. To determine whether a particular reach is within an area for which protection is proposed, please use the information provided below, and locate the status of that reach. The list is the authoritative listing of areas for which protection is proposed in the Council's rulemaking process. If you need further information about how to use this list, if you would like more information on the species of concern in a particular reach, or have other questions, contact Dr. Peter Paquet (toll free 1-800-222-3355, Oregon 1-800-452-2324, or 1-503-222-5161) at the Council's central office, 851 S.W. Sixth Avenue, Suite 1100, Portland, Oregon, 97204.

The purpose of the list of proposed protected areas is to show where proposed protected areas are located and to show the kind of fish or wildlife for which protection is proposed. In many instances, several species of concern are present in a stream reach. The proposed standard of protection for such reaches is the most restrictive applicable standard. For example, if an area contains both anadromous fish and wildlife, the anadromous fish standard would apply.

Due to space limitations, it was impractical to identify each species found in each of the reaches for which protection is proposed. However, detailed information regarding each of the species of concern is available from the Council on request.

-
- 1/ A Federal Register notice and rulemaking notice containing guidelines for submitting written or oral comments also have been prepared, and are available on request.
 - 2/ A "stream reach" is that part of a stream that runs from the mouth of the stream to its first tributary, or from the stream's intersection with one tributary to its intersection with the next tributary.

The list identifies all stream reaches included in the Council's hydro assessment studies in Oregon, Washington, Idaho, and in those parts of Montana within the Columbia River Basin.³ In the Columbia River Basin, the list begins with the stream reach closest to the Pacific Ocean, and moves upstream. For the Oregon and Washington coasts, the list starts with the southern-most stream reach, and ends with the northern-most reach. Puget Sound begins with the northwestern part of the Sound, proceeds south down the western side of the Sound (the Olympic Peninsula), and then north up the east side of the Sound.

The list is organized state by state, and by major watersheds (subbasins) within each state. Because several subbasins cross state lines, subbasin lists may include reaches from more than one state (identified by a code in the "ST" column of the list). The 76 subbasins used, and the numbers of the river reaches in each subbasin, are listed in Table 3, and depicted on the map in Attachment A. Table 4 lists the subbasins state-by-state, and county-by-county.

For each subbasin, the Proposed Protected Areas List begins with the mouth of the subbasin's major river (the river into which all other rivers empty, in the subbasin). Illustration 1 shows a sample series of stream reaches. From the river's mouth, the list moves upstream to the river's first tributary. This part of the river from the mouth to the first tributary (reach #1 on Illustration 1), constitutes the first "stream reach" in the subbasin, for which data are provided. If the stream has other tributaries, the list will follow each of those tributaries to its headwaters. If the tributary has no streams that branch off from it, then the second stream reach will consist of the tributary from its mouth to its headwaters. On Illustration 1, then, the second stream reach (#2) is the first tributary to the major river. Because the tributary has no streams that branch from it, the first tributary is a single stream reach. After reaching the headwaters of each tributary, the list will begin again at the river or stream from which the tributary branched. The next stream reach will be the part of the river from the point where the first tributary branched to the point where the next tributary branches (reach #3 on Illustration 1). The list will then proceed up the next tributary, to its headwaters. If that tributary has branches, the next stream reach will run from the point the mouth of the tributary to the point where another, smaller, stream branches from the tributary (reach #4 on Illustration 1); then to the headwaters of the smaller tributary (reach #5 on Illustration 1); then returns to the second tributary and follows it to its headwaters (reach #6 on Illustration 1). From the headwaters of the second tributary, the list returns to the main stream, and the last reach runs from the point of intersection with the last tributary to the main stream's headwaters (reach #7 on Illustration 1).

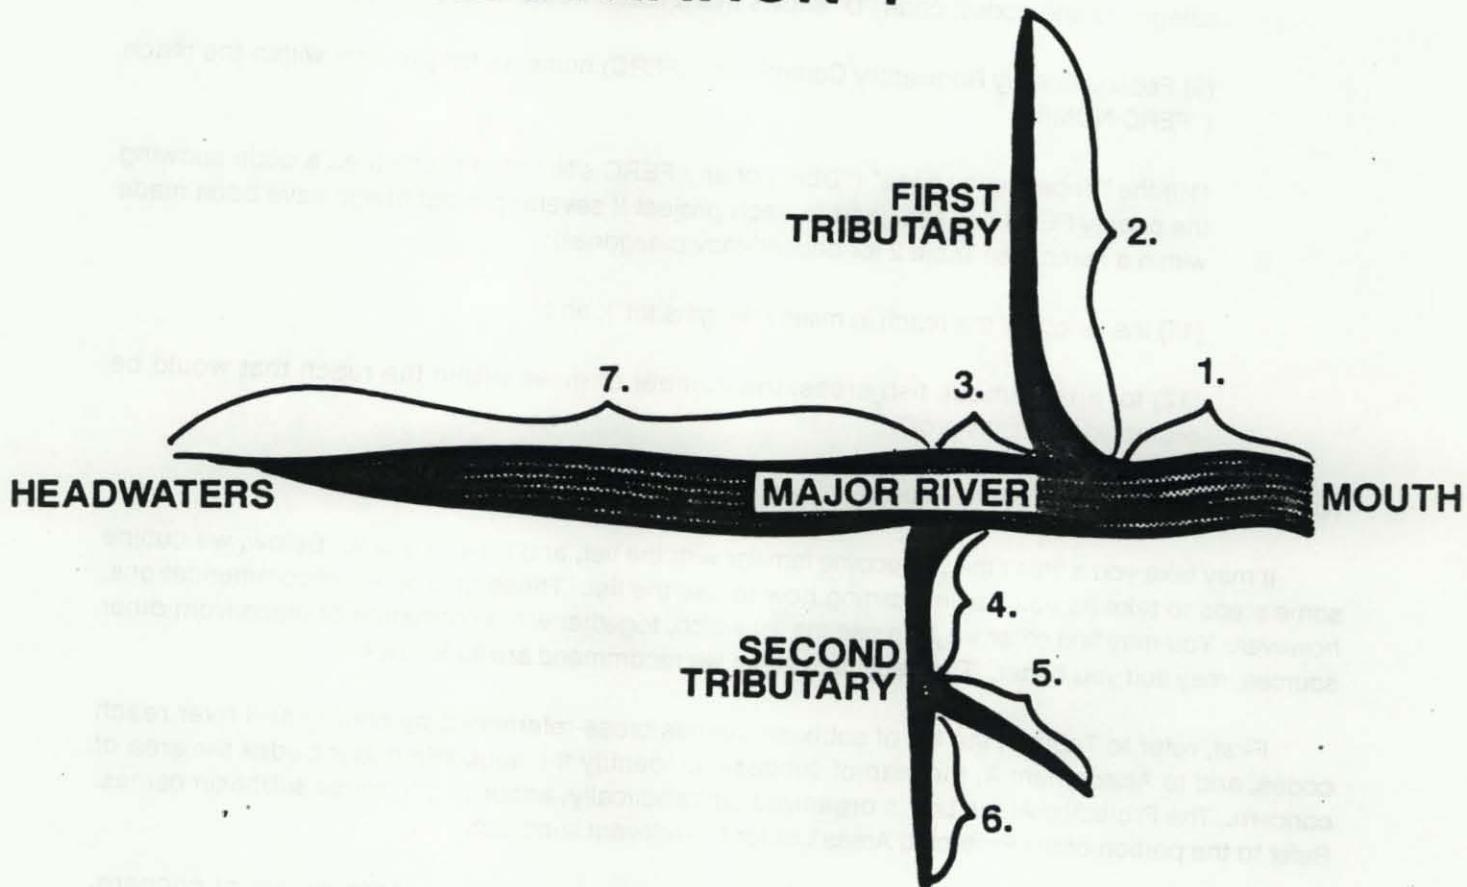

Information Provided by the List:

For each stream reach, the following information is listed:

- (1) the stream name;
- (2) the starting point of the reach ("STARTING FROM");
- (3) the end point of the reach ("GOING TO");
- (4) the name of the stream that the reach flows into ("TRIBUTARY TO");

3/ See "Protected Areas; Background and Text of Proposed Amendments," page 2.

ILLUSTRATION 1

- (5) an identification number for the reach ("ID NUM");
- (6) the county in which the reach is located ("COUNTY NAME");⁴
- (7) the state in which the reach is located ("ST");
- (8) a single letter code showing whether the reach is proposed to be protected and, if so, for what category of fish and/or wildlife ("PR CT") (see Table 1 for protected areas categories and codes; code "U" shows that a reach would be unprotected);
- (9) Federal Energy Regulatory Commission (FERC) numbers for projects within the reach ("FERC NUMB");⁵
- (10) the "dependency code" ("DEP") of any FERC site in the reach (i.e., a code showing the priority FERC has assigned to each project if several project filings have been made within a reach; see Table 2 for dependency categories);
- (11) the length of the reach in miles ("lengths tot"); and
- (12) for anadromous fish areas, the number of miles within the reach that would be protected ("lengths prot").⁶

To Locate A Particular Stream Reach:

It may take you a little time to become familiar with the list, and how to use it. Below, we outline some steps to take as you begin learning how to use the list. These are merely recommendations, however. You may find other ways to use the list which, together with information or maps from other sources, may suit you better. The beginning steps we recommend are as follows:

First, refer to Table 3, the list of subbasin names cross-referenced by county and river reach codes, and to Attachment A, the map of subbasins. Identify the subbasin that includes the area of concern. The Protected Areas List is organized alphabetically, according to these subbasin names. Refer to the portion of the Protected Areas List for the relevant subbasin.

Second, look in the "stream name" column of the list for the name of the stream of concern. Recall that the list begins with the mouth of the largest river in each subbasin and works up toward the

-
- 4/ Reaches that flow over county lines will be listed once for each county, with exactly the same data for each listing. These reaches are not double-counted in any summary or analytical information.
 - 5/ According to the Pacific Northwest Hydropower Data Base as of May, 1988. Not all FERC numbers are included on the list itself. Refer to Attachment B for additional FERC project numbers and their associated stream reach and identification numbers.
 - 6/ Less than the entire stream reach is proposed to be protected if anadromous fish use only a portion of the reach. The portion of the reach that would be protected would be the lower portion of the reach, which is closest to the mouth of the river or tributary.

headwaters. If the stream of concern has no tributaries, then there will be only one stream reach for that stream, and that will be the stream reach of concern to you.

Third, if the stream of concern has tributaries, it will have more than one stream reach. Accordingly, the stream will appear more than once in the "stream name" column, and you must find the particular reach of the stream that includes the area of concern. There are two ways to do this. First, determine what tributaries lie on either side of the area of concern, and locate them in the "starting from" and "going to" columns associated with the relevant stream name. The area between these tributaries is the stream reach of concern. Alternatively, if you are unsure of the names of the tributaries that bound the area of concern, refer to the "length" column to determine how long the first reach is. If the area of concern is on the stream and within the length of that reach, the reach includes the area of concern. If the area of concern is not within the first reach, work up the stream until you find the reach that is the correct distance from the mouth of the stream. As noted below, however, the river-mile method will not work if the reach of concern has a "0.0" entry, or no entry in the "length" column.

Fourth, refer to the "protected category" to determine whether the reach is proposed to be protected, and if so, for what reason. If you wish further information on the reasons for the listing, note the identification number for the stream reach ("ID NUM"), and contact the Council at the address and telephone numbers mentioned in the last paragraph of this Introduction.

Data are incomplete in some cases. For example, the end point for a stream reach is not provided when a reach ends outside a state. In these instances, the "tributary to" entry will say "No Downlink." In some cases stream reach lengths were unavailable, as indicated by an "0.0," or no entry in the "lengths" column of the list. The lack of stream length data in these instances will require the user to identify the tributaries that border the reach of concern, in order to find the reach. In the summaries and analyses made with this data base, this lack of stream-length data has no effect.

Two special reach types are included in the list: reaches that include a wide stretch of a river, and reaches that include part of a lake. These reaches are identified by "GOING TO" entries of "wide river reach," or "lake interior reach." These reach types are used to provide continuity in the coding system through lakes and wide rivers, but have no other significance; none of these reaches would be protected.

Information About Federal Energy Regulatory Commission (FERC) Projects (Table 5):

FERC project information is provided on Table 5, by state. In preparing Table 5, the Council relied on the best available information. However, this information may not be entirely accurate, and may be incomplete, out-of-date, or insufficiently detailed to locate a proposed project on a precise reach in the system the Council used in preparing the list of proposed protected areas. Accordingly, although the Council believes that Table 5 is generally accurate as a guide to the protections proposed for FERC projects, the table should not be relied on as a definitive statement of the proposed status of any particular FERC project. To determine the status of a particular FERC project definitively, users must locate the exact river reach or river reaches on which the project is located, and then determine the status of the river reach or reaches in the list of proposed protected areas.

The information on Table 5 includes the project name (SITE NAME), the name of the stream where the project would be located (STREAM NAME), the project's FERC number (FERCNO), the number of the stream reach where the site is located (REACH CODE), the project's status with the

FERC (STATUS), the project's "dependency code" (DEP) (see paragraph number 10, above), the project's capacity in megawatts (PROD), a code that tells whether or not the project is in the Columbia River Basin (IN BAS), and, finally, a column labelled "LOCATED TO RRN." The "LOCATED TO RRN" column shows whether a FERC project appears to be located within a given reach. If a "T" is listed in this column, the Council believes the FERC project is located in the stream reach. If an "F" is listed in this column, the FERC project may or may not be located in the stream reach, but the protected status of the site cannot be determined with certainty.

Table 1. Protected Areas Categories

<u>CODE</u>	<u>EXPLANATION</u>
A	Anadromous Fish Only
B	Resident Fish <u>And</u> Wildlife
C	Anadromous Fish <u>and</u> Resident Fish <u>and</u> Wildlife
D	Anadromous Fish <u>and</u> Resident Fish <u>or</u> Wildlife
F	Resident Fish Only
U	Unprotected
W	Wildlife Only
Z	Already Protected as a Wild and Scenic Area or Wilderness Area (Idaho Only)

Note: These codes are intended to show which standard of protection is applicable to each river reach. Where several types of protected fish and wildlife are present, the most restrictive standard of protection applies.

Where the river reach is of critical importance to several types of fish and wildlife, the codes (1) always indicate the presence of the type which qualifies for the most restrictive standard of protection, and (2) usually indicates that more than one type is present. However, in some instances reaches designated "A" may also contain resident fish or wildlife habitat which itself would be grounds for protected area designation. Detailed information on exactly which species of concern are present at each river reach is contained in the Council's protected area database and is available from the Council on request.

Table 2. Dependency Status Codes

<u>CODE</u>	<u>EXPLANATION</u>
I	Independent: projects which do not conflict with any other project for the same site or use of the same water.
D	Dependent: projects which conflict with other projects and are considered to be the "best" project.
E	Dependent: projects which conflict with other projects and whose development is precluded by the development or possible development of a "D" project.
S	Invalid code: will be updated to I, D, or S.
U	Invalid code: will be updated to I, D, or S.
