

# Summer Chinook Distribution

## File Geodatabase Feature Class

### Tags

Summer Chinook, Fish Distribution, Washington, Idaho, Columbia River Basin, Pacific Northwest, Oregon, Montana, StreamNet Project

### Summary

These data are intended for use in a variety of applications where fish distribution and activity is important. This StreamNet dataset contains distribution information for SUMMER CHINOOK based on data contributed by partner agencies. Within the feature class, spatial overlap does exist for some species/run/subrun combinations in cases where source data was contributed by multiple agencies for the same stream reach. Feature level metadata identifies the partner agency that contributed data to the regional StreamNet project and includes details about the basis for the information provided along with reference citations where available.

### Description

This dataset documents fish distribution and activity for **SUMMER CHINOOK** from data submitted to the regional StreamNet by partner agencies. This dataset was compiled from separate spatial datasets contributed by StreamNet partners as of January 31, 2019. Distribution is based upon survey data and, in some cases, the best professional judgement of local fish biologists, in the Pacific Northwest Region (Oregon, Washington, Idaho and Montana). These data were collected by biologists at the state fish & wildlife agencies of Washington (WDFW), Oregon (ODFW), Idaho (IDFG) and Montana (MFWP). Data were then compiled into spatial datasets by StreamNet partners. These separate source layers (identified in the References section of this metadata record) were submitted to the GIS staff at Pacific States Marine Fisheries Commission (PSMFC) where they were combined into a single consistent regional dataset. These and other related data are available for download from the StreamNet website and are also publicly available on ArcGIS Online and via public web mapping applications.

### Credits

Data was compiled by the StreamNet project (<http://www.streamnet.org>), which is administered by the Pacific States Marine Fisheries Commission. Data was provided by Washington Dept. of Fish and Wildlife, Oregon Dept. of Fish and Wildlife, Idaho Dept. of Fish and Game and Montana Fish Wildlife and Parks. The StreamNet project is funded by the Bonneville Power Administration (BPA Project # 1988-108-04).

### Use limitations

Data are collected at various scales by StreamNet's partners. This dataset represents believed instances of fish distribution or habitat that likely supports fish distribution, and as every stream has not been fully evaluated, this is not an all-inclusive list of fish distribution in this region. Each line included in this feature class represents a stream segment of suitable habitat currently believed to be utilized by wild, natural, and/or hatchery fish populations and/or streams where sightings of wild, natural, and/or hatchery fish have been documented. Please read the metadata thoroughly and contact PSMFC's GIS team ([gis@psmfc.org](mailto:gis@psmfc.org)) with specific questions - especially if using this dataset in any official assessment efforts.

### Extent

**West** -124.643408    **East** -113.848063  
**North** 49.000085    **South** 44.076420

### Scale Range

**Maximum (zoomed in)** 1:5,000  
**Minimum (zoomed out)** 1:150,000,000

#### FIELD EndExtentID ►

\* **ALIAS** EndExtentID  
 \* **DATA TYPE** SmallInteger  
 \* **WIDTH** 2  
 \* **PRECISION** 0  
 \* **SCALE** 0

#### FIELD DESCRIPTION

A series of enumerated values that indicate when the ending stream measurement of a fish distribution event [EndFt] is intended to indicate the top end of the stream, or the state border, or if there is a deliberate reason why the EndFt value falls short of the top of the stream or just shy or just over a state border. See the enumerated domain for decoded values.

NOTE: While this used to be a required field in prior versions of this dataset, it is now optional

so <null> values are permitted and present. This relaxing in standards allows partners to submit their data as spatial datasets with geometry as opposed to sharing data as linear event records that reference a common regional hydrography. For partners that continue to manage fish distribution as whole-stream linear events, this field serves as a useful tool to help QA/QC ending measure values that relate to their agency's established routed hydrography layer.

TITLE ODFW Fish Habitat Distribution [ODFW\_1167\_5\_FHD\_Publication.gdb]

ALTERNATE TITLES Oregon Fish Habitat Distribution - FHD\_AllSpeciesCombined (feature class)  
 PUBLICATION DATE 2018-04-02 00:00:00

COLLECTION TITLE Oregon Fish Habitat Distribution - FHD Publication (geodatabase)

OTHER CITATION DETAILS

Dataset provided to PSMFC by ODFW (Jon Bowers) on 4/2/2018 Link provided is to the ODFW distribution site for these data

RESPONSIBLE PARTY

INDIVIDUAL'S NAME Jon Bowers  
 ORGANIZATION'S NAME Oregon Department of Fish and Wildlife  
 CONTACT'S POSITION GIS Coordinator, Management Resoruces Division  
 CONTACT'S ROLE originator
